R & H Machine offers cultivator points and shovels to fit a wide variety of makes and models of cultivators. All are cast of High Chrome Alloy to give extremely long life in abrasive soils.

SAVE REPLACEMENT COSTS

R & H offers an extensive line of Chrome Alloy cultivator points and shovels to fit S-tine, KMC, and Triple K shanks. Some of these have outworn standard or hard faced points by as much as seventeen times.

SAVE COSTLY DOWN-TIME

Our parts last many times longer than original O.E.M. parts reducing down-time and the overall cost of cultivating.

RH 111

HELP MAINTAIN UNIFORM TILLAGE

The shovels maintain original width through the life of the part helping to keep uniform tillage. As a bonus, our parts will pull more easily.

HEX NUT DESIGN

Most of our points and shovels are designed to use a standard hex bolt instead of plow bolts. The bolts will last the life of the points.

SHOCK ABSORBING WASHERS

Bonded washers are provided with each R & H Chrome Alloy bolt-on cultivator point. The washer is to be inserted between the shank and the point. The use of bonded washers has virtually eliminated breakage.

PROPER USE PROLONGS LIFE

R & H points should be tightened only until the lock washer is flattened. Over tightening may result in breakage. Air impact tools should not be used. Please, **DO NOT** strike the point with a hammer to remove dirt from the shank.

R & H points and shovels keep their shape!!!

R & H Chrome Alloy CULTIVATOR POINTS & SHOVELS

R & H CHROME ALLOY POINTS and SHOVELS to fit: Danish, Triple K, KMC, and Kongskilde S-tines

In a controlled test, the R & H four-inch shovel outwore seventeen standard shovels (see p. 74). We know this is hard to believe; so we ask you to try a few on your S-tines and compare them with the best you have used so far. R & H's hex-head design makes replacement much easier when it finally becomes necessary. Our bonded washers, included with each order, have virtually eliminated breakage.
