R & H Machine makes a wide variety of shin guards to help protect your ripper shanks from excessive wear. All shin guards are made of long-wearing Chrome Alloy. We manufacture several different types of guards.

THE PRE-WELDED TYPE are fabrications consisting of a piece of High Chrome Alloy pre-welded onto a mild-steel backing for ease of installation. These come in a variety of widths ranging from 1-1/4" to 4", and lengths from 3" to 9-3/4". The pre-welded type is available in either conventional 1/2 round or high-ridge design. Shin guards that have a steel backing pre-welded onto them do not need to be heated. Just weld the backing plate into place without welding on the casting.

THE BOLT-ON and PIN-ON TYPE are made to fit specific machines such as CASE IH, TYE or KMC and simply replace the standard shin guard.

THE UNIVERSAL WELD-ON TYPE is either a triangular strip ranging from 5/8" to 1-1/4" wide, and from 6" to 15" long, or specialized weld-on shin guards for particular uses. Both can be welded directly onto the face of the shank. Since R & H Chrome Alloy has a higher chrome content than competitors use, it is necessary to follow the welding instructions precisely. All R & H Chrome Alloy weld-on parts must be heated to a **bright, cherry red** before welding. Use a mild-steel rod in a stick welder or a mild-steel wire in a wire-feed welder. Heat the casting, and, while it is still **red**, weld the part into place. The shank to be repaired should be warm to prevent cracking. Room cool out of draft.
