

Setting the Standard for Wear!

R & H PLANTER PARTS

LONG WEAR

R & H planter shoes, drill points, and skid parts are cast of High Chrome Alloy to give extremely long wear. You can expect our parts to cover many more acres than standard. PLUS there is no chrome plating or hardfacing to wear through.

SMOOTH SURFACE

Our drill points, planter shoes, and skid parts wear smooth and maintain this finish throughout the life of the part. Smooth, slick shoes and skids will not allow dirt to stick to the sides, giving sharper seed troughs, which result in better germination and yield.

PRECISION

R & H drill points and planter shoes maintain their shape and depth over a longer period resulting in more precise seed placement. Our parts will help keep the “precision” in your precision planter.

WELD-ON PLANTER INSERTS

Please check out our line of weld-on planter inserts (RH 300 series) designed to be installed onto worn or new shoes. Many of these pieces can be installed after normal wear life has been completed.

COST EFFECTIVE

Our parts may cost a little more, but will be much less expensive in the long run. When you count long life, better germination, and higher yield, you can count on increased profitability.

R & H drill points help your profits grow!!!
