

Setting the Standard for Wear!

R & H WELD-ON PLANTER PARTS

R & H Machine Chrome Alloy weld-on planter parts are designed to prolong the life of standard planter shoes. Over the years farmers have brought us their worn-out planter shoes to see what we could do to make them last longer. The result has been a line of weld-on parts designed to be installed onto their worn or new shoes. Many of these pieces can be installed after normal wear life has been completed. Consequently you can get full value from your standard part before rebuilding it with our Chrome Alloy insert.

Most of these castings have been designed for a particular use. However, farmers are extremely good at adapting parts for their needs using our wide variety of designs. We are always available to help design new parts for particular applications or problems. We have helped a great number of farmers reduce the cost of planting their crops in many areas of the country.

Important Instructions for Welding!

All R & H Chrome Alloy weld-on parts must be heated to a **bright, cherry red** before welding.

Use a mild-steel rod in a stick welder or a mild-steel wire in a wire-feed welder.

Heat the casting, and, while it is still **red**, weld the part into place.

The part to be repaired should be at room temperature.

Room-cool out of draft.
